## LogicKeyboard Introduction

LogicKeyboard is specialized in Largeprint keyboards and keyboard cover solutions.

The company was founded in 2002 and headquarters in Denmark, with sales offices in Cheyenne, WY (USA) and Guangzhou, China.

LogicKeyboard Large Print has been designed for individuals who suffer from visual impairments, or just have a hard time reading the existing commands on their keyboards.

The products are high quality, well designed, and attractive.

## Why use Largeprint keyboards

Our large print keyboard solutions help users with impaired vision to more easily and accurately type on the keyboard when using the computer.

Our Large Print keyboards and Large Print Logicskins are designed with different high contrast colors to fit individual needs.

With an USB port on each side of the keyboard, users can plug in our LogicLight to further enhance visibility.

Our LogicSkin can help protect the keyboard or laptop computer from spills and dirt.

Our fully Mac compatible Bluetooth wireless keyboard can be used with iPhones, iPads and Android tablets.

# LARGE PRINTS

## Products

LogicKeyboard products include Apple keyboards, Windows keyboards, LogicSkins, LogicLight.

We use high quality standard Apple and Windows keyboards. No additional drivers need to be installed. They can be used for any applications just like regular keyboards.

Our Largeprint keyboards and skins have largeprinted keys with different color coding to for your need.

## Apple keyboards

We use original Apple keyboards and customize in different color variations.

Our Apple keyboards provides users with high quality products and unquestionable compatibility to the Mac platform.

Our Apple keyboards are printed with color background and Largeprint letter commands on the top surface of the keys.

## Windows keyboards

Our keyboard features two USB 2.0 ports to allow convenient connection of flash memories, cameras, mice, and other USB devices.

It is a full-size 107 keys (108 keys for the European version) keyboard with separate navigation keys and numeric pad.

In addition to our standard silver color keyboard with a brushed finish, we also offer a Nero line of black color keyboards that fits well in a dark color décor and reduces glare from other light sources such as the computer monitor.

## ASTRA Series - Backlit keyboards

Our newest line is the Astra backlit Windows keyboard. The Astra line features an attractive modern keyboard design. These keyboards have built-in backlighting for use in a dark environment and even easier visibility of the letters.

The keys are illuminated from inside the keyboard so there is no need for a lamp. There are five different illumination levels to suit every user's needs.

Note: The Astra keyboard will be available for Mac in September 2016

## LogicSkin

LogicSkins are silicon keyboard covers that are printed with the same color-coded Largeprint solutions as our keyboards.

LogicSkins can easily be placed and removed from the keyboard so they are very portable. They also have a secondary benefit of protecting the keyboard from dirt and spills.

We have LogicSkins that cover full size Apple keyboards, and Unibody LogicSkins that cover the Apple wireless keyboards, the small size USB keyboards, and most Macbook Pros. Our new Magic LogicSkins are for Apple's new Magic wireless keyboards.

*Macbook Pro Unibody skins*

*Keyboard skins*

*Full size mac skins*

Our LogicSkins for Macbooks have air channels to allow heat from the Macbook keyboard to dissipate more easily.

Note: We do not make LogicSkins for Windows keyboards because there are too many keyboard varieties.

Our LogicSkins are made of soft Japanese silicon. They can be crumbled, stretched, and even washed without losing their shape.

Note: We do not have LogicSkins that fit the 11" Macbook Air and old Macbooks sold before Jan 2009.

## LogicLight

The LogicLight 2 is an improved version of the LogicLight product introduced in 2014.

The light shade can be rotated a full 360 degrees. The flexible light arm can be adjusted to any desired angle.

The LogicLight 2 plugs into any USB port from which it gets its power.

The Logiclight is made up of 10 cool white LEDs with a heat temperature rating of about 4500. At half power, only 5 LEDs light up.

It features a touch sensitive on-off and dimmer switch. Just tap the tip end of the light with your finger and it goes on, off, or half power.

## LogicGo

The LogicGo is a travel carrying bag for our keyboards. It is designed to allow you to carry your keyboard to locations where lighting is poor or non-existent. The bag ensures that your keyboard is fully protected enroute.

The bag features a layer of protective material covered by an attractive black canvas fabric. It is stylish and features short handles as well as a shoulder strap.

The LogicGo can both be used as a handbag or as a shoulder bag with the adjustable shoulder strap. Thoroughly protects your Logickeyboard when you are on the go. Opens flat to speed up trips through airports security. The bag contains a large handy accessories pocket.
